# NORDIC LIFE

The Nordic style is one of the most appreciated and requested when it is time to furnish your home. Soft colors, natural light, untreated materials. The search for a design that reflects the harmony and beauty of nature.

NATURAL LIGHT

NATURAL MATERIALS

SUSTAINABILITY

ESSENTIAL DESIGN

NEUTRAL TONES

# SUSTAINABLE DESIGN

Wisely dosed bright colors stand out against natural and soft patterns where shades of white, gray and beige predominate. Cleanliness and sobriety are the basis of the design in Scandinavian style, that warms the houses through a wise dosage of more aggressive colors.

## CONTEMPORARY ELEGANCE

## COLORS

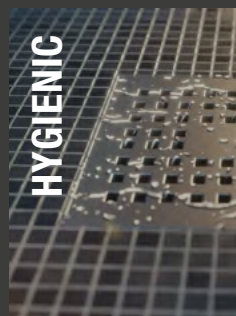

# PORCELAIN STONEWARE PERFORMANCE

Porcelain stoneware is a ceramic made of an extremely hard and compact paste, which is full-body colored and vitrified by firing in an oven at high temperature and therefore waterproof.

Thanks to these characteristics, it is a **safe, weather-resistant and frost-proof material**

that does not wear out over time and maintains its appearance and colors unaltered, it is **stain-resistant and easy to clean**, it is versatile and may be laid on floors and walls, for interior and exterior use. The **11 mm** thickness is ideal for increasing friction on floors exposed to water or frost and withstands stress and heavy loads better.

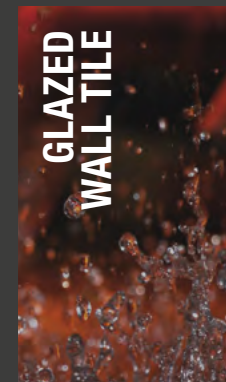

# CERAMIC TILE PERFORMANCE

Ceramic tiles are produced from finely treated clay by **double firing**.

**Natural raw materials** and pigments take shape in the precious formulas of glazes expressed in a **wide range of surfaces and colors for infinite decorative possibilities**. With their particular surfaces and the wide range of formats and structures, ceramic tiles characterize the walls creating suggestive effects of light and movement.

**Light, beautiful and easy to lay:** an ideal product for bathroom and kitchen walls.

# GREEN DESIGN

The Pro System collections are born from a **blend of natural raw materials** and the entire production aims to **reduce the environmental impact** and guarantee eco-friendly quality, thanks to **safe industrial processes, certified** according to the highest international Certiquality standards, the pre-consumer recycling and reduced CO2 emissions, supported by the reduction of energy consumption and respecting environmental sustainability. The **entire production is in fact closed circuit, thanks to a system for the collection and use of production waste, processing water, raw materials contained therein** and the heat generated in some phases. A wide range of products is made with addition of recycled materials meeting the requirements of LEED® certification for the construction of eco-sustainable buildings.

The environmental impact along the life cycle of the products is assessed through the LCA analysis and published with the EPD certification (Environmental Product Declaration). Those who choose Pro System porcelain stoneware love natural materials typical of the purity of the Scandinavian style, but at the same time want to protect the environment in which we live.
